SG Tech Stack (SGTS)

Service Layer
REUSABLE COMPONENTS

Base Layer
STANDARDISED DEV TOOLS

Network and Infra Services

Government on Commercial Cloud (GCC)

StackOps and CStack

stackops

An infra and app monitoring and logging service based on Elastic Cloud. Upcoming features include compliance with ABLR.
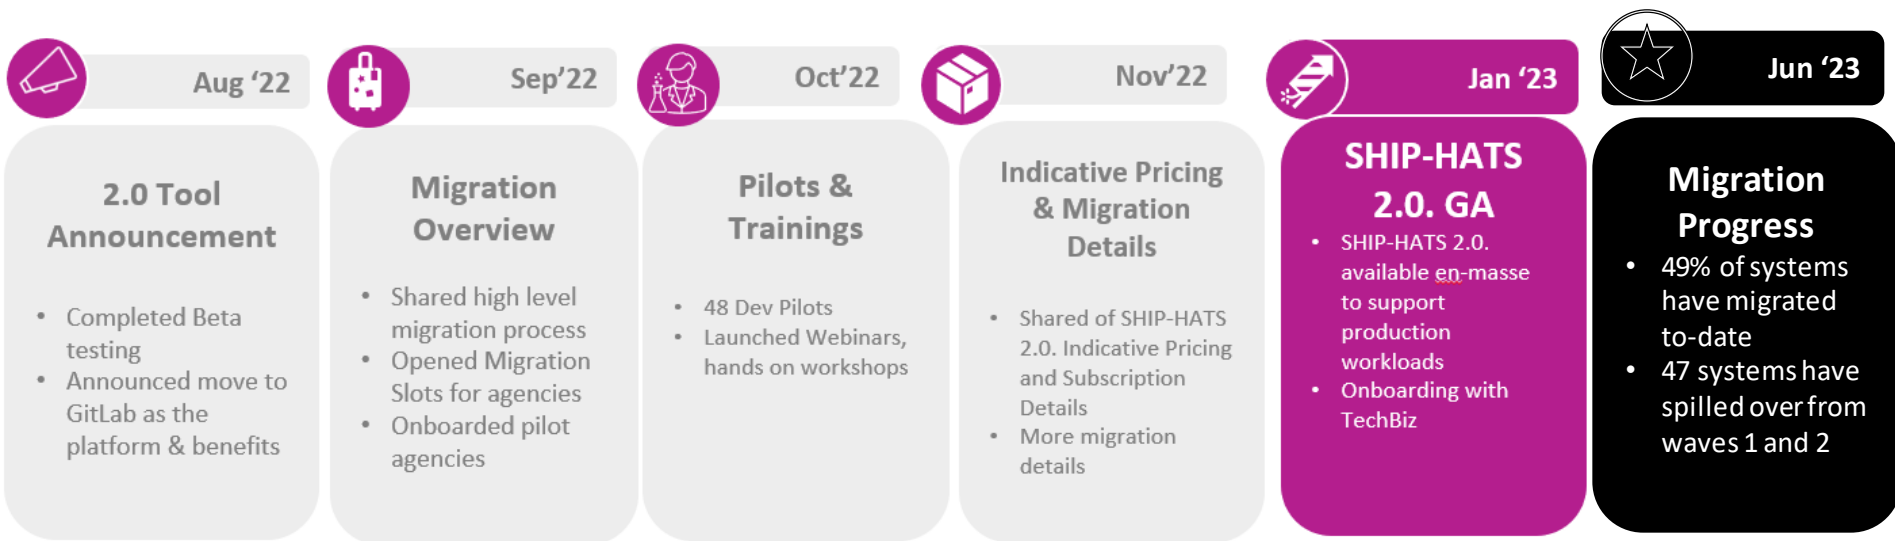

container stack

A Container Platform for WOG to embrace GitOps with "Everything-as-Code" based on Kubernetes and fully integrated to SGTS services to simplify compliance

SHIP-HATS
2.0. Recap

Recap: SHIP-HATS 2.0. Key Activity Timelines

Aug '22 — 2.0 Tool Announcement

- Completed Beta testing
- Announced move to GitLab as the platform & benefits

Sep'22 — Migration Overview

- Shared high level migration process
- Opened Migration Slots for agencies
- Onboarded pilot agencies

Oct'22 — Pilots & Trainings

- 48 Dev Pilots
- Launched Webinars, hands on workshops

Nov'22 — Indicative Pricing & Migration Details

- Shared of SHIP-HATS 2.0. Indicative Pricing and Subscription Details
- More migration details

Jan '23 — SHIP-HATS 2.0. GA

- SHIP-HATS 2.0. available en-masse to support production workloads
- Onboarding with TechBiz

Jun '23 — Migration Progress

- 49% of systems have migrated to-date
- 47 systems have spilled over from waves 1 and 2

GOVTECH SINGAPORE

Recap:
SHIP-HATS 2.0
Goals

1. Faster time to market
- One DevOps Platform
- End-to-End Source Code Management & CICD

2. Greater Transparency
- Pre-Defined Industry DevOps Metrics and Dashboards, incl DORA
- Value Stream Measurement Capabilities

3. Built-In Security
- Compliance Pipelines
- Integrated Security Testing

SHIP-HATS 2.0. Product Offering
Tools under-the-hood

Access (by default)	Planning	Build	Build Testing SAST	Other Tests Code quality scanning, DAST, Container Scanning	Deploy & Release

SEED

GitLab-Native

GitLab
The One DevOps Platform

- **GitLab Ultimate Tier Licenses** which comes with features including value stream measures and dashboards
- Offers integrated native tools from planning till deployment
- Dedicated SaaS managed instance hosted in Singapore

Alternative Tools

Confluence

Jira

nexus repository pro

nexus lifecycle

Fortify on Demand

sonarqube

pCloudy.com

TOOL SELECTION

Agencies must assess whether Gitlab native is sufficient (e.g. whether the gitlab-native tool supports the language/framework used etc).

1 GitLab Native only

- ✓ Lean teams
- ✓ Simple use cases
- ✓ New Projects
- ✓ Value for $$

2 GitLab & Alternative tools

- ✓ Already on alternative tools
- ✓ Complex use cases
- ✓ Migrating agencies

Migrating agencies are advised to migrate as-is

❖ **Both** options **meet Security** Policy needs

❖ Alternative tools are available as add-on anytime

GOVTECH

Learnings

Learnings from Wave 1 to 3

1. **Review the migration checklist holistically**
   To **plan subsequent action items** (especially activities involving external parties), review the migration checklist holistically

2. **Simplify your AOR**
   Focus the scope of your AOR on your agency/project subscription to SHIP-HATS 2.0 and don't couple it with other related services, such as Vendor SR. We also recommend seeking a budget sufficient for approximately two years of operations instead of a longer period (5+ years) as the pricing may be revised and it's best to keep things flexible.

3. **Onboard early**
   Onboard via TechBiz as soon as your AOR is approved, to **focus pipeline creation** during the wave

GOVTECH
SINGAPORE

Learnings from Wave 1 to 3

4. **Plan any Subscription restructure with Migration Consultant**
   If you need to re-structure your subscription (merge or split), plan it together with your migration consultants **before TechBiz registration** as incorrect setup will lead to several downstream issues.

5. **Estimate correct effort**
   Review [effort estimation webinar](#) to size right

GOVTECH
SINGAPORE

Learnings from Wave 1 to 3

6. **Be active in your Migration Jira Ticket and communicate with your consultant**
We will be communicating timeline slippages with your agency CIO

7. **Create GitLab groups after project remapping**
Do **not** create your groups in GitLab before we complete the portal project remapping. Don't skips steps.

GOVTECH
SINGAPORE

Migration
Steps

Description

Hi POC,

This Jira ticket will be used to track your migration activities from SHIP-HATS 1.0 to 2.0 as well as to address any questions/issues that you may have.

As you may know, SHIP-HATS 2.0 has GA on 4 Jan 2023. We will be conducting a Kickoff Briefing two weeks prior to the start date of your booked Migration Wave. Do look out for the invite soon. The briefing will cover the processes involved in onboarding to SHIP-HATS 2.0 via TechBiz, along with a brief on the overall Migration process.

Before attending these briefings, we recommend that you can get started to prepare for the migration with the following activities:

1. Add any of your team members involved in the migration to this Jira ticket as participants.
2. If your project includes outsourced vendors, a reminder to ensure that your AOR/CR/SR has been approved prior to the migration period, to ensure that there are no delays to the migration schedule.
3. Do ensure that your team members are onboarded to SEED (https://docs.developer.tech.gov.sg/docs/security-suite-for-engineering-endpoint-devices/) and TechPass (https://docs.developer.tech.gov.sg/docs/techpass-user-guide/onboard-public-officers-using-non-se-machines) as these are pre-requisites to onboarding to SHIP-HATS 2.0.
4. Define your project onboarding success criteria. If you need help in structuring your success criteria, we have provided a sample version here: https://docs.developer.tech.gov.sg/docs/ship-hats-migration/files/migration-checklists.xlsx
   - Please feel free to add/modify the non-critical criteria based on your project requirements.
5. Skill-up on SHIP-HATS 2.0's GitLab platform via the following:
   - SHIP-HATS 2.0 Webinars (https://docs.developer.tech.gov.sg/docs/ship-

0

Pre-migration Prep

1. Review Jira Migration ticket

2. Understand Technical Considerations

3. Review Current Tools and Services in SHIP-HATS 1.0 & Subscription Package

4. Raise Internal AOR for 2.0 Tools & Services

5. Raise Vendor SR (as applicable)

6. TechPass & SEED (if applicable)

7. Use Success Criteria template and define your success criteria

Source code repo size

< 2 GB Repo
Repos Auto Migrated by SHIP-HATS

> 2 GB Repo
Agency Project team manages a manual transfer OR
Reduce repo size before migration

Shared Runner

Docker in Docker not supported in SHIP-HATS 2.0 due to security risk

Use to **Kaniko** as alternative to Docker to build your containers for your pipeline

Pre-migration Prep

1. Review Jira Migration ticket

2. Understand Technical Considerations

3. Review Current Tools and Services in SHIP-HATS 1.0 & Subscription Package

4. Raise Internal AOR for 2.0 Tools & Services

5. Raise Vendor SR (as applicable)

6. TechPass & SEED (if applicable)

7. Use Success Criteria template and define your success criteria

Base plan

- 3 x GitLab Ultimate User License
  - Got more users? You can buy up to 47 additional GitLab Ultimate license as Add-on. If you have more than 50 users (3 Base + 47 Add-ons), you will need to purchase additional Base plan.
  - One subscriber can have more than one Base plan
  - Fair Usage Policy – 1 GitLab license is entitled to up to 10 GB
- Standard support (9:00 AM to 5:30 PM except public holidays)
- pCloudy shared

Add-ons

Component	What's Included	Notes
GitLab Ultimate	1 x GitLab Ultimate User License	Based on the number of users
Jira/Confluence	1 x Jira/Confluence License	Based on the number of users
Sonatype Nexus IQ & Nexus Repo	1 x Nexus IQ	Based on the number of users
	1 x Nexus Repo User License	
pCloudy Testing Farm	1 x pCloudy ios Device (dedicated)	1 device can be used concurrently across multiple GitLab Projects, and tests can be run in parallel
	1 x pCloudy Android Device (dedicated)	
SonarQube	1 x SonarQube Community Edition App	1 app can be used for 1 subscription (i.e. shared across GitLab projects)
	1 x SonarQube Dev Edition App	1 app can be used for 1 subscription (i.e. shared across GitLab projects)
Fortify-on-Demand	1 x FOD App	1 app can be shared across multiple GitLab Projects, but tests cannot be run in parallel
Additional support	Per hour (after 5:30 PM)	Outside office hours

Pre-migration Prep

1. Review Jira Migration ticket

2. Understand Technical Considerations

3. Review Current Tools and Services in SHIP-HATS 1.0 & Subscription Package

4. Raise Internal AOR for 2.0 Tools & Services

5. Raise Vendor SR (as applicable)

6. TechPass & SEED (if applicable)

7. Use Success Criteria template and define your success criteria

Success Criteria

1. Operational Source Code Repository in GitLab
2. Operational FOD Application (if applicable)
3. Operational CI & CD pipeline in GitLab
4. GitLab Dashboards
5. Removal of Projects on 1.0 Tools

Sample Success Criteria

	Objective	Acceptance Criteria
1	Accept User roles	Agency team accepts that roles defined for developers and Security Team.
2	Accept SHIP-HATS 2.0 templates used in setting up the CI/CD pipeline	Agency team is aware of SHIP-HATS 2.0 that the pipeline has been set up as per
3	Accept Compliance Framework applied	Agency team understands that applying DevSecOps best practices.
4	Accept	Agency team confirms that SAST tests h... ...ashboard.
5	Accept	...ns that SCA tests ha... ...y Dashboard.
6	Accept Container Scanning capability	Agency team confirms that Container te... available for review in Security Dashboa...
7	Accept DAST security test capability	Agency team confirms that DAST tests s... Security Dashboard
8	Accept pipeline execution across multiple repositories	Agency team has tested and verified tha... repository and is able to successfully re...
9	Accept access control for executing pipelines	Agency team has tested and verified tha...
10	Accept IT Management Dashboard	Agency team has verified that SHIP-HAT... that the revelant team members unders...
11	Sign off the CI/CD Pipeline	Agency team accepts that the pipeline h...

Sample Success Criteria available on Developer Portal for download!

1 Subscription using TechBiz

Basics

TechBiz is a subscription & billing management tool that allows users to subscribe, manage and report their Singapore Government Technology Stack (SGTS) resources

What can you do:
➢ Submit Subscription Request
➢ Agency Approvers can approve the request
➢ Subscription Admin adds users and system details

Who can access:

➢ Public officers from Agency using <u>Non SE – GSIB</u>

TechBiz Portal Access link:

portal.techbiz.suite.gov.sg

GOVTECH
SINGAPORE

Use the how-to videos

①

Subscribe using TechBiz

1. Agency Subscription Admin create Subscription Package on TechBiz Portal

2. Agency Approver approves the subscription account

3. Create systems and users

4. Verify system on TechBiz

5. Update details on Jira Migration ticket re: mapping

go.gov.sg/sh2indicative

Accessible via GSIB to review pricing information .

Documents > SHIP-HATS 2.0 > Onboarding how-to videos

▶ step-1-create-subscription-pac...

▶ step-2-approve-account.mp4

▶ step-3-create-system-name.mp4

▶ step-4-create-users-and-grant-...

Public Officers can access **how-to videos for subscription via TechBiz** via Intranet.

GOVTECH
SINGAPORE

Subscribe using TechBiz

Mapping of 1.0. to 2.0. Accounts

1. Agency Subscription Admin create Subscription Package on TechBiz Portal

2. Agency Approver approves the subscription account

3. Create systems and users

4. Update details on Jira Migration ticket re: mapping

Update Jira Migration ticket after subscribing on TechBiz!

1. TechBiz Account ID

2. SHIP-HATS Portal Subscription ID

3. Projects to be mapped (if doing partial migration)

Note: Once we have mapped your 1.0. subscription to your 2.0. subscription in the SHIP-HATS Portal, your 1.0. subscription in the SHIP-HATS Portal will be "**frozen**" and you will have to **raise an SR** to make changes to your 1.0. subscription

- The mapping will take 2 to 3 business days
- Refer to the Jira ticket for updates on whether mapping has been completed
- After completion, you may proceed to the next step to verify on SHIP-HATS Portal

2 Configure SHIP-HATS Portal

② **Configure SHIP-HATS Portal**

1. Access SHIP-HATS Portal

2. Verify Users & Systems

3. Verify Project & Tools

4. Create any new Projects & Assign Project Admin

5. Set up GitLab & other tools

SHIP-HATS Portal Access link:

portal.ship.gov.sg

②

Configure SHIP-HATS Portal

1. Access SHIP-HATS Portal

4 Verify SCR

Verify SCR

SAMPLE VERIFICATION REPORT

Instructions

This report is a high level view of the migration with diffs listed between source and destination. The report is meant for engineers to get details and stats without having to rely on other teams to verify all the details about the migration. This report DOES NOT replace User Acceptance Testing. The report will show a color coded 'Overall Accuracy' along with individual endpoint 'Accuracy'. Anything with an accuracy of 90% or above is considered a success, and isn't worth looking at unless something comes up in User Acceptance Testing. Items under 90% accuracy should merit further investigation.

Project Migration Results	Overall Accuracy	Result
Staged Project's: '13' Successful Project's: '13'	99.94%	success
Project	**Accuracy**	**Result**
gitlab-instance-0b248ec6/Monitoring	99.26%	success

All Migrated Projects Results

Individual Migrated Project Results

endpoint	accuracy	diff

/projects/:id	77.78%	show/hide
		
		{

5 Configure Pipelines

Configure Pipeline

Pipeline Template list & links *available on Developer Portal*

- **End-to-End templates:** An end-to-end CI/CD workflow for a specific use case such as .Net application hosted in Azure App Service, Java application hosted in AWS EC2, etc.

Your project pipeline plan

- End to End Reference Template
- Your project specific variables

← Copy

End to End Templates
from GovTech

Example Use Case:
.NET applications hosted in Azure App Service
- **Modular templates:** A stand-alone basic template for invoking build, test, deploy tools, etc.

Your project pipeline plan

- Your project specific scripts
- Modular Testing Template
- Modular Repo Template
- Your project specific variables

← Include

Modular Templates
from GovTech

- Build & Release Templates
- QA & Security Templates
- Artifact Repository Templates
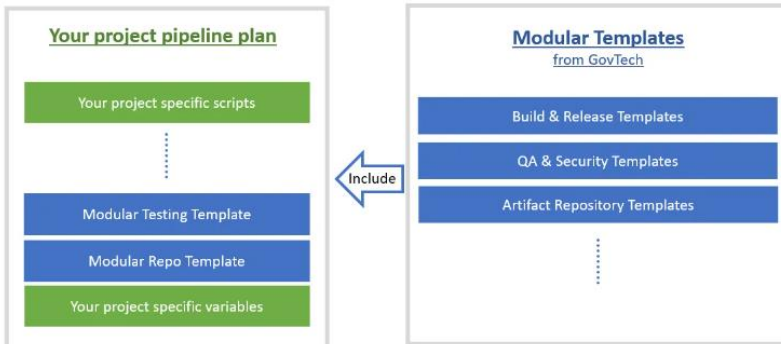

E2E templates

Template	Description
SHIP-HATS Docker Image CI Pipeline Templates	This template allows you to deliver a compliant CI pipeline for a standard docker application (regardless of language) considering best practices as well as security aspects.
SHIP-HATS Docker Multi Services App E2E Templates	This template allows you to deliver a compliant CI/CD pipeline for a standard docker application (regardless of language) considering best practices as well as security aspects.
SHIP-HATS Docker Single Service App E2E Templates	This template allows you to deliver a compliant CI/CD pipeline for a standard docker application (regardless of language) considering best practices as well as security aspects.
SHIP-HATS Webapp E2E Templates	This template allows you to deliver a compliant CI/CD pipeline for a standard web application (regardless of language) considering best practices as well as security aspects.

Common templates

Template	Description
Readiness check for web application	This template allows you to check if a web application is ready by querying the URL and searching for a given text in a loop until a given wait duration.
Readiness check for docker service	This template allows you to check if a web application is ready by querying the URL and searching for a given text in a loop until a given wait duration.
AZ CLI invocation	This template allows you to invoke Azure CLI commands.
Depcheck for NPM projects	This template allows you to perform depcheck for their npm projects to identify unused dependencies.
AWS identity federation	This template allows you to invoke AWS CLI within the *script* key.
AWS Secret Retrieval	This template allows you to invoke AWS CLI within the *script* key.
AWS EKS kubectl	This template allows you to invoke kubectl commands within the *script* key.

SINGAPORE

5 Set up CI/CD Pipeline

5 CD Environment Setup

TEMPLATE DRIVEN PIPELINE CONFIGURATION

Legend:
- Pipeline Task
- Decision
- Milestone Activity

Flowchart:

Start → E2E Pipeline Template meet your use case needs ?

- **Y** → Copy Template in repo & update project variables → Apply Compliance Framework to project → Do you require additional capability not available in E2E templates
  - **N** → Test pipeline
  - **Y** → Modular Pipeline Template meet your use case ?
    - **Y** → Include modular Template in repo in your gitlab-ci file

- **N** → Create new gitlab-ci pipeline file in repo → Apply Compliance Framework to project → Define Stages → Modular Pipeline Template meet your use case ?
